

I can't believe that we're doing this right now. We're talking about a national health care program that's going to add additional trillions of dollars. We're talking about bailouts to the financial institutions and to the auto industry. We're talking about a cap-and-trade program that's going to increase the cost of every family in America between \$3,000 and \$4,000 to turn on their lights or to buy gasoline at a service station or anything else that produces energy. We're adding about \$2 trillion a year to this debt, and it's unsustainable. It is going to affect every man, woman, and child who is living in America today, but what it's going to do to future generations is unbelievable.

We can destroy this Republic if we don't get control of spending. This is a political hyperbole. I'm telling you right now that we can destroy this form of government and this civilization we have, just like Rome did, if we don't get control of spending. It is out of control. It is out of control. We're \$56 trillion in debt today, and we're adding \$2 trillion a year, plus all of these additional programs we're coming up with. In the next 5 years, they say we're going to spend an additional \$5 trillion. We don't have it, so we're putting this burden on our kids and on our grandkids.

It's wrong. We have to do something about it. We have to do it now. We have to start getting our spending in order. My Republican and Democrat colleagues understand that. Mr. WOLF is a Republican who sent this out, and Mr. COOPER is a Democrat. They understand it. We all ought to understand it.

#### ENERGY

The SPEAKER pro tempore. The Chair recognizes the gentleman from Florida (Mr. KLEIN) for 5 minutes.

Mr. KLEIN of Florida. Madam Speaker, it is an honor to be here today to talk in this House about energy. This is a moment in time when, I think, most Americans understand this great opportunity we have to really turn things around for our future in this country. It's about three principal elements that aren't just tied to the high cost of gasoline. It's about national security; it's about a better environment; and probably, as one of the most important things for this moment, it's about jobs. It's about a new economy.

We'll just talk about national security. I think all of us understand very clearly, every American, no matter where one is from, the fact that importing oil is the basis for a lot of the dependency that we have. Sixty percent or so of the oil that we take in the United States comes from outside the United States. We depend, unfortunately, on many countries that are, at best, not our friends and that are, at worst, our mortal enemies, who fund terrorism and threats against the United States and against our allies around the world. The sooner that we

can take oil out of the centerpiece of our natural resource dependency, the better. That's not to say we don't have oil in the United States and that, yes, we're going to drill more and all that kind of thing. What I'm talking about is the fact that much of our oil comes from places around the world, from the Middle East, from Venezuela and from other places that are not stable places for us to depend on this.

Number 2 is our economy. We know that we have a great opportunity in terms of this next generation of jobs to be created relating to alternative energy and to the various kinds of alternative energies that are out there right now that are being developed by our scientists, by our engineers, and by our businesspeople.

There is one thing that, I think, is just incredible and that I'll just give by way of an example because we know about solar and wind and a lot of other things. I'm from Florida, and I was speaking to one of our utility companies the other day, and they're talking about building the largest solar plant in the world in Florida. Over the years, we've heard, Oh, well, there isn't enough sun or maybe other things. Well, now there is a general recognition that anywhere in the United States there are great opportunities for solar. The technology is moving along, and we need to continue to incent that continued higher level of development of battery storage for solar and things like that.

One of the things he said to me is, in building this plant, they have to import the mirrors—these are the pieces of equipment to hold the solar and to capture the power—from Germany. Hundreds of millions of dollars of this product have to come in from Germany because we don't produce it here in the United States.

Why? Why don't we produce it? Why isn't that a job opportunity that is based right here?

I think that one of the things that's going on right now in the investment recovery act that we've put together and other things that, I think, all of us share, Democrats and Republicans and as Americans, is the idea that, if we're going to talk about energy, we have to incentivize business and industry and the engineers in our universities to develop the science, to develop the entrepreneurship, to give the tax incentives for investment for that type of energy in the United States, and to build the equipment here in the United States.

There is no reason. It costs a lot of money to ship fragile mirrors over from Germany. We can build it here. We can build it better. We can probably export it and can compete with the rest of the world.

□ 1100

I think that's a pretty exciting opportunity, and there are so many other areas. In my district off the coast of Florida, most of you have heard of the gulf stream. That's that perpetual cur-

rent, 24/7, 365 days a year, that runs up and down up to north along the east coast. Well, right now, one of our local universities, Florida Atlantic University, is developing technology where they can put turbines in the Atlantic Ocean and capture that energy.

I don't know if this is going to work long-term, but that's the kind of American ingenuity that we're looking for, and we as a government and private sector, our scientists, our entrepreneurs, we need to work together to capture that and build on that.

And of course, there's the environment. We all understand that, and there is something going on in the world on climate. People can have different opinions. I think most scientists agree there's something going on, and whatever we can do in the United States and around the world to provide leadership to reduce the impact of CO<sub>2</sub> and other things, it's good for all of us.

I live in a coastal area, 75 miles on the Atlantic Ocean, some of the most beautiful areas in the world. We obviously are very sensitive to the hurricane activity, to the rise of the Atlantic Ocean, things like that, but I think we all understand there's an environmental issue at the same time.

So what are we doing here in Washington? We're working very collectively, and there are a lot of business and industry actively supporting some of the various ideas that are coming forward to work on this in a very productive way to make sure that the United States is leading the world in these areas of alternative energy.

And we're debating a bill right now and I know our colleagues are asking for comments from back home. We obviously want to do it in a way that allows for appropriate levels of transition for our industries who are dependent on old fuel sources to move to new fuel sources. We need to work together to make sure that the system eases in a way that is economically competitive. That's what we need to do. At the same time, we ought to be encouraging as much as we can getting these products into play.

So I'm very excited about the fact that we can build a new energy future, and I look forward to working with all of our Members to do that.

#### WE NEED A NATIONAL ENERGY THAT DOESN'T PICK WINNERS AND LOSERS

The SPEAKER pro tempore. The Chair recognizes the gentlewoman from West Virginia (Mrs. CAPITO) for 5 minutes.

Mrs. CAPITO. Madam Speaker, I'm here today to talk about the same issue that my colleague from Florida just talked about, and that's energy. He alluded to the energy bill that's been moving through Congress over the last several months, but he neglected to say that in that bill are some real costs for real people. And I think these are the important issues in front of our Nation today.
